# Global Secure Travel
## Protecting your staff and assets overseas

**CTR Secure Services focus on delivering bespoke travel-related risk management solutions and professional security services, to clients that require fully tailored solutions that meet the demands of their business.**

We achieve this through understanding every aspect of your business including operational commitments, the values you hold and the internal culture of your organisation and staff.

By understanding your business, we can identify the level of support required to reduce risk to your global business travel and operations.

## What makes us different?

We build enduring relationships with our clients and focus on their specific needs, as opposed to suggesting generic solutions which have little positive effect.

We recruit leading specialists in their field who have gained years of travel and security experience, and are acknowledged in their area of expertise.

We believe in innovation through our approach and the integration of technology, ensuring we are pioneers within the risk management field.

## Solutions

CTR can deliver a range of leading travel risk management solutions to enable your business to make informed decisions and to promote safe travel and operational environments.

### Global Intelligence (GI)
Our Global Intelligence capability provides leading analysis and reporting solutions, with a view of reducing risk in relation to global operations. Our analysts address the political, economic, commercial and security risks across the globe or specifically for areas that affect your operational footprint. Relevant and informative reports are then delivered directly to our clients, including a quick view summary for each report.

### Country Risk Assessments
Our risk assessment capability is designed for managers and those responsible for crucial decision making, enabling risks to be identified and then mitigation and control measures recommended.

### Journey Management (Physical)
Our journey management capability provides a physical approach to our clients travel, from meet & greet services at airports across the globe through to dedicated venue and route reconnaissance. Where a high level of risk has been identified, then our journey management services provide an increased duty of care and level of protection.

### Close Protection
Our Close Protection capability provides clients with dedicated and experienced staff to provide a safe living, working and travel environment. Whether as a team or individual protection officer, our staff can integrate into the daily routine of our clients whilst continually assessing the situation and delivering concentric circles of high-level protection.

### Terrorism Monitoring
Our capability allows for the monitoring of various terrorist organisations and their operational footprints across the globe, including intelligence on incidents and hot spot mapping to ensure that your business is always aware.

### Security Audits & Testing
Our audits assist organisations in ensuring that current in house policies and procedures are relevant, up to date and cater to the demands of the business. Audits of this nature are essential to ensure that the core of the travel security strategy reflects and keeps up to date with changes in technology, growth of the organisation and political and social changes.

## Process

To add the most value to your business, then we need to understand your business, your staff and your operational goals. This will require an assessment conducted by individuals with the highest level of expertise and customer respect, and at the same time building a professional relationship with each client.

**The aims of our assessment are to:**
- Understand your business
- Assess current policies and procedures relating to travel security
- Identify potential areas of improvement
- Provide recommendations to enhance your current strategy
- Provide differing levels of support
